Chapters 1–5 : Integrated Professional Methods

PRO-Only Research Notice: Independent FYF analytical work focused on advanced prediction, integration of daśā, transit, strength, and synthesis logic.

## Chapter 1: Prediction vs Probability

Chapter 1: Prediction vs Probability examines predictive judgment beyond single-rule astrology. Advanced prediction depends on convergence across systems, not isolated indicators. This chapter formalizes how multiple timing layers and strength thresholds interact.

Professional-grade prediction requires restraint. Only when indicators repeat across independent systems should outcomes be elevated from possibility to probability. FYF applies this discipline to prevent overprediction and narrative bias.

Case synthesis emphasizes auditability. Each conclusion must map back to measurable astrological factors, preserving analytical accountability.
